ABSTRACT

The American Association of Community Colleges (AACC) periodically conducts a survey of community colleges to identify "hot" programs, defined as programs from which students are hired immediately upon graduation. Survey findings include the following: (1) reported starting salaries for hot program graduates increased by 21% between 1997 and 2000; (2) 75% of students in the credit hot programs identified in the survey are enrolled in either computer technology or allied health; (3) dental hygiene has the highest reported salary increase, with a 32% jump since 1997; (4) 65% of respondents offering training for information technology (IT) vendor certification offer the training on a for-credit basis; (5) 9% of new credit courses/programs were added in response to a demand for workers in skilled trades such as construction, welding, and carpentry; and (6) the Bureau of Labor Statistics projects that between 1998 and 2008, jobs requiring an associate degree will increase by 31%, the largest percentage increase among all educational levels. The top five credit fields of study, by percentage of all hot programs and percentage of hot program students served, are: (1) computer technologies; (2) allied health; (3) skilled trades; (4) engineering; and (5) business. Appended are Hot Credit Programs by Field of Study and Hot Noncredit Programs by Field of Study Statistics. (Contains 11 tables.) (NB)

- Points of view or opinions stated in this document do not necessarily represent official OERI position or policy.

he American Association of Community Colleges (AACC) periodically conducts a survey of community colleges to identify their "hot" programs, defined as programs from which students are hired immediately upon graduation. In the 2000 survey, responding colleges indicated the number of students enrolled in hot programs and the average starting salary received by graduates, as well as credit and noncredit programs added to the curriculum in response to specific business and industry demands. Respondents also indicated which types of information technology (IT) vendor certification training they provide. Survey findings include the following:

- Reported starting salaries for hot program graduates increased by 21 percent between 1997 and 2000.
- .75 percent of students in the credit hot programs identified in this survey are enrolled in either computer technology or allied health.
- Dental hygiene has the highest reported salary increase, with a 32 percent jump since 1997.
- 65 percent of respondents offering training

for IT vendor certification offer the training on a for-credit basis.

- Nine percent of new credit courses/programs were added in response to a demand for workers in skilled trades such as construction, welding, and carpentry.
- The Bureau of Labor Statistics projects that between 1998 and 2008, jobs requiring an associate degree will increase by 31.2 percent, the largest percentage increase among all educational levels.

Methodology

his report includes findings from the 2000 hot programs survey, the third of its kind. Most of the questions matched those of the 1994 and 1997 surveys, but some new questions were added. For example, the 2000 survey examined the types of credit and noncredit IT-credentialing programs offered by community colleges.

AACC sent the survey to chief academic officers at more than 1,100 community colleges. A total of 205 colleges responded, for a 19 percent response rate. For analysis, the various unique programs that colleges identified were classified into program areas, such as computer networking or office support, which for the purpose of this report are called *programs*. Similar programs were then grouped into

broad *fields of study*. Appendix A lists nine credit fields of study and their programs. Appendix B lists 14 noncredit fields of study and their programs. Again, these breakdowns were created for the purpose of analysis and this report only.

Respondents were asked to estimate the starting salary of hot program students. The survey did not discern between those individuals new to the workforce and those who have been working in the program area for some time.

The hot programs survey provides a sample of the trends in community college programs, based on the opinions of administrators at responding colleges. Because of the relatively low response rate, the authors caution against viewing these results as representative of a definitive national trend.

TABLE 1 15 Most Frequently Cited Hot Credit Programs

Programs	Percentage of Credit Programs in Survey	Reported Average Starting Salary	Average Students per Program
Registered Nursing	15.3%	\$32,757.01	128
General Computer Technologies	12.5%	\$34,242.19	221
Computer Networking	8.2%	\$38,767.94	170

Credit Programs

In the previous surveys, allied health and computer technologies are among the hottest fields, with 75 percent of all students reported in the survey enrolled in these fields. Table 1 shows the top 15 programs reported by responding colleges, along with their average salaries and the average number of students per program. Registered nursing was the program most frequently reported as hot, both overall and within the allied health field of study, as was the case in both the 1994 and 1997 surveys. Radiology technology, which did not rank

among the top hot programs in 1997, is now the seventh-hottest program. Physical therapy assistant, the fourth-hottest program in 1997, did not make the 2000 top 15 list.

Table 2 shows a regional perspective. Following the national trend, registered nursing and general computer technologies are hot in most regions. The exception to this is in the Pacific region, where networking and computer technician/networking programs are in the greatest demand. This finding may be attributed to the concentration of IT companies in the Pacific Northwest and California.

As Table 3 shows, six of the 10 programs with the highest student enrollments fall into the computer technologies field. The general computer technologies program attracts the most hot program students, 21 percent. Nursing accounts for 15 percent of all hot program students served.

According to the 2000 survey, the average reported starting salary for hot program graduates is \$32,200. This figure represents a 21 percent increase since the 1997 survey, in which the average starting salary was \$25,500. Between 1996 and 1999, the average income for all employees with an associate degree rose by 13 percent, from \$28,514 to \$32,152 (Table 4).

The dramatic rise in reported starting salary may be a result of a growing demand for skilled workers in an increasingly tight labor market, especially in the computer and IT fields. The program with the highest increase in reported starting salary, however, is not IT related. Dental hygiene had the highest reported salary increase, with a 32 percent jump since 1997.

The starting salary for registered nursing increased by nearly 14 percent since 1997.

Although registered nursing is the top hot program

by definition (students hired immediately upon graduation), it has the eighth-highest starting salary. Table 5 shows the top 10 credit programs by starting salary.

There is a significant range between the minimum and maximum starting salaries reported for hot program graduates. These differences may be caused by a variety of reasons, including the varying skills required for jobs, the availability of workers, salary variations by region, or reporting errors.

Community colleges have always been responsive to workforce needs, striving to meet training demands for the fastest-growing occupations. Since 1997, 65 percent of credit courses/programs added to the curriculum by responding community colleges were in computer technologies, with computer networking making up 47 percent of the computer technology courses. Eighteen percent of programs added were in the allied health field, and of those, 20 percent were medical office assistant courses.

Not all new courses are IT or allied health related, however. Nine percent of new credit courses/programs were added in response to a demand for workers in skilled trades such as construction, welding, and carpentry (Figure 2).

Noncredit Programs

Moncredit programs attract a broad range of students, from those working to attain a general equivalency diploma, to those with bachelor's or master's degrees seeking a career change, to the many students seeking personal enrichment through a variety of classes and activities. Whereas hot credit programs are primarily academic or occupational in nature, noncredit programs reported as hot usually fall into the categories of vendor certification training (Microsoft or Cisco, for example), skills upgrade, or self-improvement.

Table 6 shows the most frequently cited noncredit programs. Computer literacy, which includes courses on learning to use the Internet and overcoming the fear of computers, accounts for 11 percent of all noncredit programs.

As with the credit programs, a large percentage of noncredit programs defined as hot are found in the computer technologies field of study. Computer networking is the largest of all programs in this field, accounting for 15 percent of all noncredit programs and 56 percent of computer technologies programs.

Office support, in the business field of study,

includes Microsoft Office User Specialist (MOUS) and other courses that could also be defined as computer literacy. Because of their business nature, these were classified as office support, a program area that accounts for nearly half of all noncredit business programs (see Appendix B).

In addition to ascertaining which noncredit offerings are hot, the survey examined the courses/programs that have been added in response to requests from local business and industry.

Following overall trends, courses/programs in the computer technologies field of study were among those most frequently added. However, some noncomputer courses/programs such as Spanish as a second language and truck driving also were among the noncredit courses/programs added (Table 7).

Certifications

Coording to a recent survey by the Information Technology Association of America (ITAA 2000), a trade association representing the IT industry, more than 10 million IT jobs exist in the United States today, and 1.6 million more will be created during 2001. Many of these jobs require vendor certifications, and according to the ITAA survey, community

colleges were selected by business and industry as effective in developing the needed IT skills.

Eighty percent of the respondents in the AACC hot programs survey offer training for at least one IT vendor certification listed on the ITAA survey. The AACC survey examined how many colleges offered training for the most sought-after certifications, and whether the training is offered on a for-credit or noncredit basis.

The majority of training leading to a vendor certification (65 percent) is offered on a for-credit basis. Cisco Certified Network Associate (CCNA) certification training is the most frequently reported credit training and is offered by 46 percent of respondents. The most frequently reported non-credit certification training offered is for the MOUS certification, provided by 26 percent of responding institutions (Table 8).

Employment Projections

Coording to the Bureau of Labor Statistics (BLS), between 1998 and 2008, civilian employment will increase from 141 million jobs to 161 million jobs, or 14 percent. During this period, jobs requiring an associate degree are projected to increase from 4.9 million to 6.5 million, an increase of 31.2 percent and the largest percentage increase among all educational levels (Table 9).

BLS tracks information on individual occupations and on entire industries. For the decade 1998 to 2008, the bureau projects that nine of the top 10 fastest-growing occupations will be found in either the computer or allied health fields (Table 10). Similarly, the computer technologies and allied health industries will have the largest growth through 2008 (Table 11).

In both credit and noncredit areas of the AACC hot programs survey, programs in the computer technologies and allied health fields accounted for the most students and were among the most frequently reported hot program areas. These educational areas may lead to jobs in the computer and data processing services and health services industries.

BLS projects that the management and public relations industry will be the fourth fastest-growing industry. Business administration was one of the most frequently reported hot noncredit programs.

Community colleges train students for many occupations in demand by business and industry. The examples included here are just a sample of the results and BLS comparisons that illustrate community colleges' continuing commitment and responsiveness to the nation's workforce needs.
